

From Demolition to Construction to Operation: We Are Your ReSource

STEP 1 – DEMOLITION

The demolition project takes place. The demolition waste is hauled off in ReSource Waste Services trailers or roll-off trucks and hauled to one of the ReSource Waste processing facilities.

STEP 2 – ROLL-OFF DELIVERY

ReSource Waste Services delivers a roll-off container to the job site and the construction project begins.

STEP 3 – ROLL-OFF PICK-UP

When the roll-off container is full, ReSource Waste Services picks up the construction waste and hauls it to the ReSource facility for processing.

STEP 4 – SORTING

The waste is processed by ReSource Waste Services, and reusable materials are recovered through a certified sorting process conducted by state-of-the-art equipment and personnel.

STEP 5 – PROCESSING

Reusable materials are separated and shipped to customers for use in new products and other applications.

STEP 6 – ONGOING SERVICING

After the new building is constructed and in operation, ReSource Waste Services continues to service the site with roll-off services.
